SUSTAINABILITY AT ORBIS EUROPE

Our commitment to sustainability

Every day, we help our customers reduce their overall environmental impact by shifting from steel, wood or one-way packaging to returnable plastic packaging solutions. To improve sustainability and efficiency, we design customised solutions to solve supply chain challenges and execute a reusable packaging program for long-term cost savings and sustainability.

ORBIS Europe provides alternatives to the disposal of damaged or obsolete plastic packaging. By design, plastic FLCs and pallets are robust and reusable over the course of their service life. Eventually, we offer to buyback obsolete containers at the end of their service life for the raw material value. Fostering a circular economy approach, the plastic raw materials can be recovered, recycled and reprocessed into new useful packaging products. That prevents the plastics from entering the solid waste stream and harming the environment.

CIRCULAR ECONOMY

Example: For the HDB1012-980 2 DR LS, we use 71% recycled post-industrial HDPE.
